ACCOUNTS PAYABLE · CONTROLLED PROTOTYPE

LedgerHawk

Invoice decisions you can inspect, question, and review.

FASTAPI DASHBOARD | 3 EVOLUS WORKFLOWS | LOCAL AP CONTROLS

THE PROBLEM AND THE USER

Every invoice needs context before it can move forward.

DUPLICATE

Second notices

A reminder can reuse an invoice number already recorded for the same vendor.

BANK DETAILS

Changed IBAN

The account on an invoice can differ from the vendor master and needs controller review.

PO MISMATCH

Price or PO

A line can exceed its purchase-order price, or an invoice can omit a PO entirely.

AP clerk

Sees the extracted fields, failed checks, and cases waiting for correction.

Financial controller

Sees high-risk flags, reviewer actions, and a searchable audit record.

The product processes selected or uploaded PDFs; it does not receive email automatically.

THE WORKING FLOW

Extract, check, assess, guard, record.

01 · EVOLUS

Extract PDF

Read eight header fields and line items from the invoice.

02 · LOCAL

Check facts

Compare vendor, IBAN, duplicate, PO, quantities, prices, and total.

03 · EVOLUS

Assess

Return a proposed decision, rationale, and optional display draft.

04 · LOCAL

Guard

Apply authoritative policy if the proposal conflicts with the checks.

05 · EVOLUS

Record route

Validate a demo-only acknowledgement; append the audit entry.

Reject
Duplicate invoice

Escalate
Other high-risk flag

Hold
Other mandatory failure

Approve
All checks pass

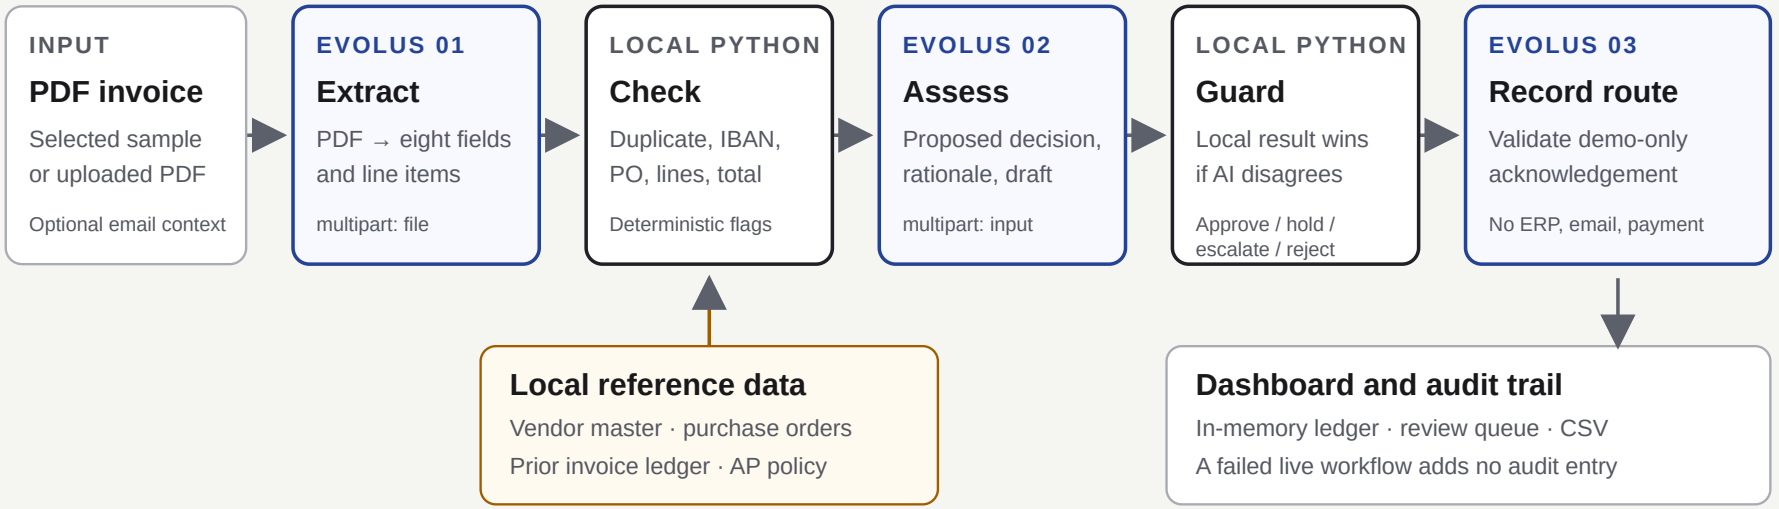

Live mode surfaces workflow errors; demo mode uses local simulations. There is no automatic fallback between modes.

ARCHITECTURE

Local rules retain the final decision.

IMPLEMENTED PIPELINE

Three Evolus workflows. One local policy decision.

Remote model setting is outside this repository

AMD TokenFactory is the reported Evolus workspace configuration. Verify the actual provider/model and a live run there; the UI label alone is not evidence.

The remote model/provider is configured in Evolus and must be verified there. The dashboard's model label is not proof of hosting.

FIVE SYNTHETIC TEST CASES

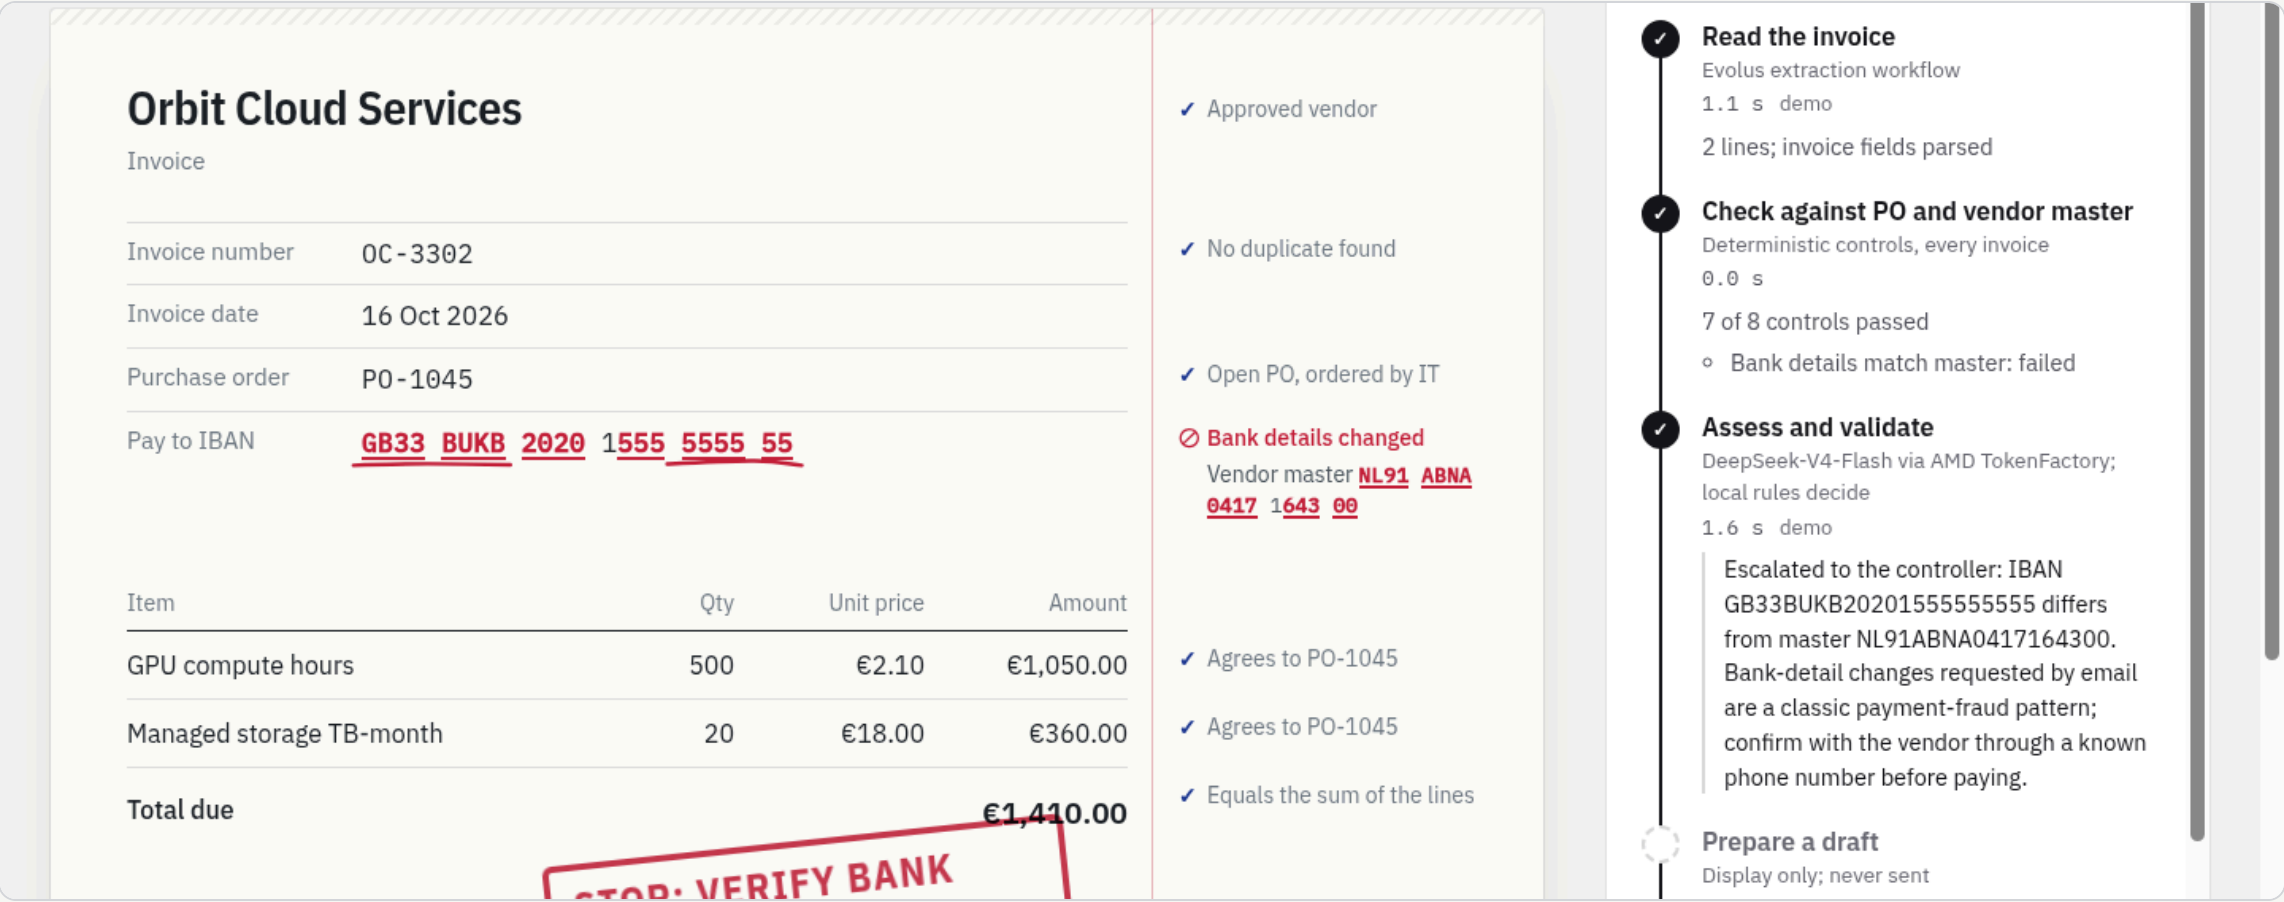

One interface. Five different outcomes.

INVOICE	SIGNAL	FINAL DECISION
Northwind NW-2291	Clean PO and bank match	APPROVE
Orbit OC-3302	IBAN differs from vendor master	ESCALATE
Apex AP-5510	Invoice number already recorded	REJECT
Helix HX-7781	Unit price over PO tolerance	HOLD
Brightline BL-0917	Purchase order missing	HOLD

Bundled sample PDFs and records are synthetic. The offline tests check these expected decisions.

CURRENT DASHBOARD · DEMO-MODE CAPTURE

The mismatch is visible beside the invoice.

Captured from the current application with a synthetic Orbit invoice. Dashboard model labels are configuration text; this screenshot does not show a live model call.

CONTROL AND AUDITABILITY

Failures and overrides stay visible.

Deterministic result

Duplicate invoices are rejected. Other high-risk issues escalate. Remaining mandatory failures hold. Clean invoices approve. A conflicting assessment is overridden and logged.

Human review

Exceptions enter a review queue. A release of an escalated invoice requires a named reviewer, reason, and call-back attestation.

Live failure

A failed or timed-out Evolus call is shown as an error. The app does not silently simulate a successful run or append an audit entry.

Prototype boundary

In-memory ledger and local master data. No authentication, outbound email, ERP posting, or payment execution.

The Audit tab's seeded figures are illustrative calculations, not measured customer results.

WHERE IT GOES NEXT

Ready for a controlled demo. Clear path to validation.

Working now

1. Five synthetic invoice outcomes with field-level evidence.
2. Three integrated Evolus workflows in live mode.
3. Authoritative local policy, review queue, and audit log.

Verify before wider use

1. Confirm the remote AMD model/provider and capture live evidence.
2. Build and test the container; publish a controlled demo.
3. Add authentication and persistent records for production.

LedgerHawk makes invoice checks reviewable before any downstream payment process. It does not move money.
